W14-P1: Use sql to create schemas of cabins_xx, guests_xx, bookings_xx, settings_xx, and use Uploader to upload all data

The screenshot shows a development environment with VS Code on the left and a Supabase Table Editor on the right.

VS Code (Left): The file explorer shows a project structure with folders like `public`, `src`, and `data`. The `src` folder contains `data-bookings.js`, `data-cabins.js`, `data-guests.js`, and `App_31.jsx`. The `data-bookings.js` file is open, showing a function `uploadAll` that calls `deleteBookings`, `createGuests`, `deleteCabins`, and `createBookings`. The `uploadAll` function is highlighted with a red box.

Supabase Table Editor (Right): The interface shows a table named `bookings_31` in the `public` schema. The table has columns for `id`, `created_at`, `start_date`, `end_date`, `cabin_id`, `guest_id`, `has_breakfast`, `is_paid`, `num_guests`, and `observations`. The table is highlighted with a red box.

The screenshot shows a development environment with VS Code. The file explorer shows a project structure with folders like `src` and `data`. The `src` folder contains `data-bookings.js`, `data-cabins.js`, `data-guests.js`, and `App_31.jsx`. The `data-cabins.js` file is open, showing a function `uploadAll` that calls `deleteBookings`, `createGuests`, `deleteCabins`, and `createBookings`. The `uploadAll` function is highlighted with a red box.

The `data-bookings.js` file is also open, showing a function `uploadAll` that calls `deleteBookings`, `createGuests`, `deleteCabins`, and `createBookings`. The `uploadAll` function is highlighted with a red box.
